EVANS CHAUN

Software Developer

Nairobi, Kenya | +254 743645826 | evanschaun2@gmail.com | LinkedIn | github.com/Evanslodctor

PROFESSIONAL SUMMARY

Full-stack Software Developer with 3+ years of experience building web applications, payment integrations, and business intelligence solutions across frontend, backend, and AI-enabled systems. First Class Honours graduate in Computer Science with hands-on experience developing business systems, integrating third-party APIs, and streamlining operational workflows. Skilled in React, Next.js, Python (Django, FastAPI), Node.js, and cloud deployment, with practical experience in LLMs and Retrieval-Augmented Generation (RAG). Combines strong software engineering skills with a background in technical training, IT support, and business process automation.

WORK EXPERIENCE

Excelle Insights | ***Software Developer*** **May 2025 - Present**

- Implemented a real-time vehicle service tracking system that streamlined client and inventory management processes, improving operational efficiency and service visibility.
- Integrated M-Pesa, Cooperative Bank payment APIs, and WhatsApp messaging into core business systems, streamlining payment processing and communication workflows.
- Designed and built a QR-code-driven guest ordering platform with a full administrative backend, enabling complete contactless dining.

Digiview Training Institute | ***Developer*** **Feb 2024 - Feb 2025**

- Built Power BI analytics dashboards for business reporting, giving management clear, data-driven visibility into performance and decision-making.
- Optimised the company website for speed and usability, improving the experience for prospective students and visitors.
- Trained 100+ students in software development and technical skills, equipping them with practical competencies for employment

NHIF | ***IT Intern*** **Apr 2022 - Jul 2023**

- Delivered first-line IT support by troubleshooting hardware, software and network issues, minimising staff downtime and keeping departments productive.
- Set up, maintained and installed systems on computers across departments, ensuring staff had reliable, ready-to-use equipment.
- Supported daily IT operations and resolved user-reported technical issues promptly, sustaining service delivery

EDUCATION

BSc, Computer Science **Jan 2019 - Jan 2023**

Meru University of Science and Technology (GPA: First Class Honours) *Meru, Kenya*

- **Achievements:** Academic Excellence: Ranked 1st in the Department of Computer Science and 2nd in the School of Computing and Informatics.

CERTIFICATIONS

ALX Software Engineering Programme (Full-Stack / Specialization Track) : ALX Africa / Holberton School **2023**

- **Core stack & skills:** C, Python, JavaScript, ReactJS, SQL, Git/GitHub, Unix/Linux, Data Structures & Algorithms, Problem-Solving.
- **Key project:** Built a full-service web application and collaborative capstone project implementing a complete front-end and back-end architecture.

HIKVISION CCTV Training **Sep 2024**

Machine Learning - AWS Training **May 2024**

React - Simplilearn **Jan 2024**

Python - Simplilearn **Jan 2024**

Back-End Development and APIs - freeCodeCamp **Sep 2022**

Java - Simplilearn **Mar 2022**

Data Science - WorldQuant University

PROJECTS

AI-Powered WhatsApp Messaging Application | ***Excelle Insights*** **May 2026 - Sep 2026**

- Architected and deployed an AI-powered messaging application using natural language processing (NLP) to automate customer interactions via WhatsApp.
- Implemented official WhatsApp Business API integrations to handle high-volume outbound messaging campaigns and inbound customer queries.

- Engineered intelligent conversational routing and automated fallback flows to seamlessly transition complex queries from the AI assistant to human support agents.

Workshop & Garage Management Application | ***Excelle Insights*** **Aug 2025 - Apr 2026**

- Engineered a comprehensive workshop management platform designed to streamline garage operations, job scheduling and mechanic workflows.
- Built an AI diagnostic and repair log system that enables mechanics to track real-time repair history, diagnostics and part replacements.

QR-Powered Hotel Management System (HMS) **Sep 2026 - Present**

- Architected a scalable, multi-department hospitality platform supporting real-time room reservations, front-office check-ins and point-of-sale (POS) features.
- Built a dynamic QR menu system allowing guests to scan, browse and place direct restaurant and bar orders without app installation.

SKILLS

Front-End
React
Next.js
JavaScript
HTML
CSS
Bootstrap

Back-End
Python
Django
FastAPI
Node.js
PHP
REST
GraphQL
MVC

Databases
MySQL
PostgreSQL
SQL Server

AI/ML & Data
LangChain
OpenAI API
RAG
Vector Databases
Prompt Engineering
Machine Learning Fundamentals
Power BI

Tools & Practices
AWS
CI/CD
Git/GitHub
Socket.io
Netlify
VPS
